1. Download Tutu AVI MPEG Converter at http://www.tutusoftware.com/downloads/t-avi-mpeg-converter.exe;
2. Double-click the file "t-avi-mpeg-converter.exe";
3. Step 1: License Agreement. You should agree the License or the installation will be terminated;
4. Step 2: Choose Destination Folder.
5. Step 3: click "Install" to finish the installation.

Remove Tutu AVI MPEG Converter

You can use "uninstall" in the "start menu" or the installed directory. And you can uninstall the software by "Add/Remove program" in "Control Panel".

Buy and Register software

To buy the software

You can goto our website (http://www.tutusoftware.com) to buy the software, or you can click "Buy" in the menu of "Help". Then you will get the registration code of the software by email.
To register the softeware

CLick "Enter registration code" in the menu of "Help", and then fill the content of "Register Page" (Registration code will be in your email).
Getting start Converting a Video file

1. ## Select the files to be converted;

   There's three ways to add file
   i. Menu "File" -> "Add file"
   ii. Toolbar button "Add File"
   iii. Drag files to the software file list area

2. ## Delete and Move up/Move down

   To delete a file in the list, just choose the file, click "Delete" button or push the "Delete" key in the keyboard.
   "Move up" and "Move Down" are designed for adjusting the position in the list. The top one will be converted first

3. Output Setting: Profile and Desination

    Choose a Profile, that is the format you want to convert, and choose the destination path in "Output" area of the setting see "[Adjust Output Quality](#)".

4. Screen Crop/Pan

    When convert video between 16:9 and 4:3 video, you have some choices. The details see "[Screen Crop / Pan](#)".

5. Start converting

    When all files that to be converted were done configuration, just click "Convert All " to convert all audio files in th Selected" to convert the audio file that was selected, and wait for a while(taken time depends on converted files

Adjust Output Quality

In the main interface of the software, there's an area named "Output". It's to config the output in three aspects:

1. ## Profile choosing

   You can choose a profile to do the basic output converting config. And all of the video / audio codec parameters is optimized and predigested, the default setting can do good job.

2. Video / Audio detail config

   you can do the advanced settings by yourself like video size, bit rate, frame rate, etc. in this section.
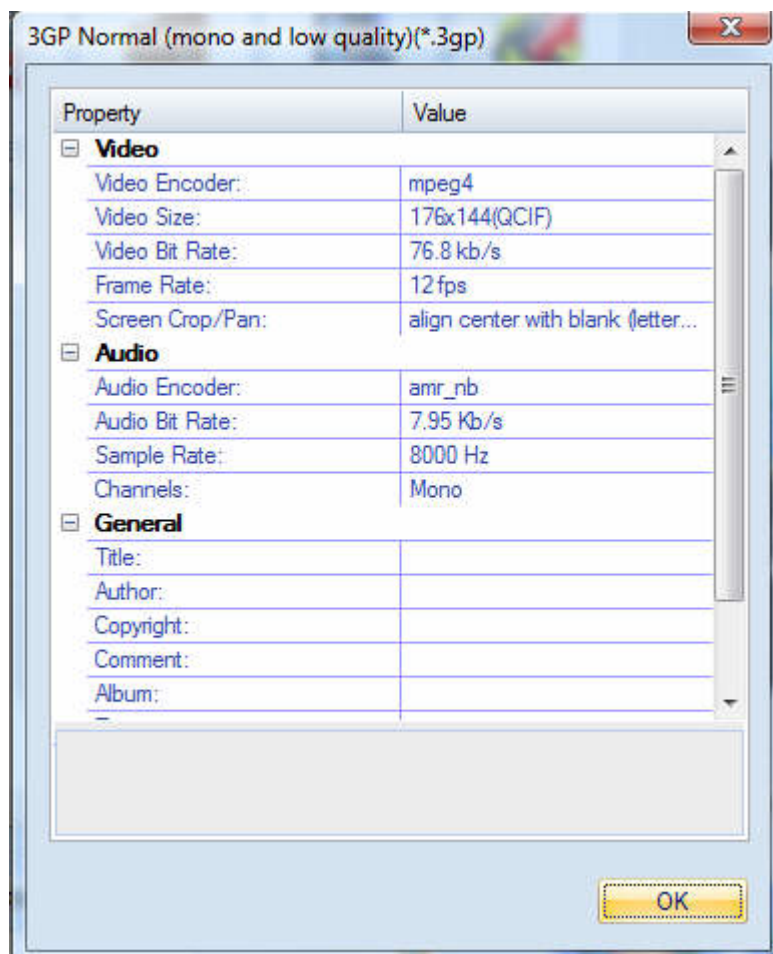

So, you can adjust thesr video / audio parameters by yourself. And every option of these parameters was tested and configed well by us to make all this easy to you.

Set general info of output file

You can select the directory that you want the output files be, and set some general info for the file such as: title, author, time etc.
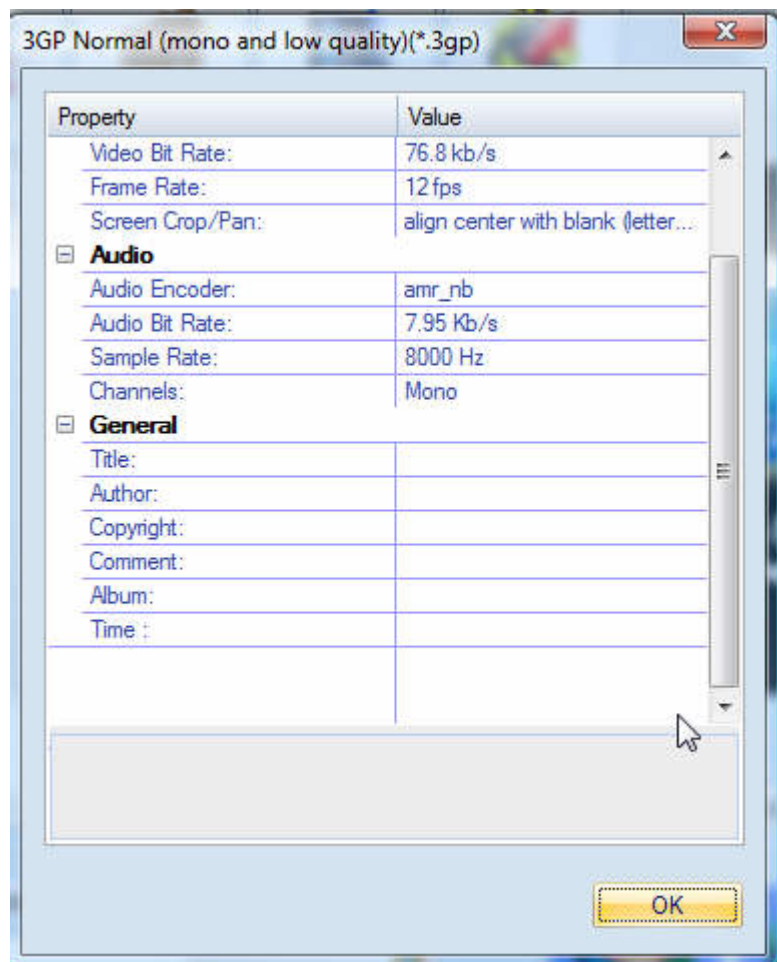

Destination choosing

Click "Explore" to select the directory that you want the output files be.

NOTE: The output file's main file name is the same to the source file by default. If you repeat converting the same file, in the same directory will create files named by adding suffix 1, 2,3 etc.

Preview and play video files

Choose a file in the file list area, and then click the "Play" button, you can preview and play video files .
File Property

Choose a file in the file list area, and right click, in the menu, click "Property" to show the infomation of the file.

```
File Property                                             x

    File Name:t_ruse_debut_gdc09_hd
    File Path:E:\
    File Size:44344KB
    Duration: 00:02:15.3
    BitRate:  2683 kb/s
    Video:
            Codec   :     wmv3
            BitRate:      2500 kb/s
            Size    :     1280x720 [PAR 0:1 DAR 0:1]
            Frame Rate:   29.97 tb(r)
    Audio:
            Codec   :     wmav2
            BitRate:      128 kb/s
            Sample Rate:  44100 Hz
            Channel:      stereo

                                              Close
```
File Name:t_ruse_debut_gdc09_hd
File Path:E:\
File Size:44344KB
Duration: 00:02:15.3
BitRate: 2683 kb/s
Video:
Codec   :   wmv3
BitRate: 2500 kb/s

Screen Crop / Pan

There are two kind of video by screen scale in the main: Normal Screen and Wide Screen.

Normal Screen generally means 4:3 (width:height), and Wide Screen means 16:9, and there're many other video aspect ratios (e.g 2.35:1, 5:4, 11:9, 15:9, 16:10).

Then there's a problem coming up: what you should do when convert video from different video aspect tatios?

Well, we offer 7 options to do converting like this, you may choose the following crop modes based on your personal preference.

Screen Crop / Pan options	Wide Screen --> Normal Screen	Normal Screen --> Wide Scre
Mode 1: Stretch to fullscreen (image distorted)		
Mode 2: Crop to fullscreen (Pan & Scan)		
Mode 3 (Recommended): Align center with blank (letterbox)		

Mode 4: Align left with blank (for special purpuse)		
Mode 5: Align right with blank (for special purpuse)		
Mode 6: Align top with blank (for special purpuse)		
Mode 7 : Align bottom with blank (for special purpuse)		

Set the start time and stop time

If you want to convert a file just for a snippet, then you will need this function.

Here you can convert just a part of a media file by setting the start time and stop time.

To do this, choose the file in the list, then you can write the start time and stop time in the text area. See sketch map below:
